

Patient-oriented research pathways self-assessment readiness tool for researchers

October 2019

Version 1.0

Introduction

The **Patient-Oriented Research Pathways Self-Assessment Readiness Tool for Researchers** was developed out of interest in uncovering competencies required to engage in <u>patient-oriented research</u> through a review of the literature (see the <u>Appendix</u> for details).

This Tool provides a way for researchers to assess their readiness to participate in health research that uses a patient-oriented approach. *A* research team would not be expected to be proficient in all competencies, but rather the team would determine which of these competencies are applicable to their project and members would determine where they need to develop competencies and can use the learning resources suggested in the Tool.

Patient-oriented research is:

- Done with patient partners as research team members
- Answers questions, & measures outcomes, that matter to patients
- Aims to improve healthcare

Patients can be involved in POR in varying degrees. This diagram shows these levels of engagement. We are using the Australian National University's language in the table to the right.¹

How to Use the Tool

Use the Tool by reading the competencies and rating yourself on a scale of 1-4. Use the results as a point of discussion on a research team or for your own personal/professional development, accessing the learning resources suggested.

	INFORM	CONSULT	INVOLVE	COLLABORATE	EMPOWER
STAKEHOLDER PARTICIPATION GOAL	Researchers provide stakeholders with balanced and objective information to assist them in understanding the research process.	Researchers obtain stakeholder feedback on the research process.	Researchers work directly with stakeholders to ensure that stakeholder concerns and aspirations are consistently understood and considered in the research process.	Researchers partner with stakeholders for salient aspects of the research process.	Researchers assis stakeholders in conducting their own research.
PROMISE MADE TO STAKEHOLDERS BY RESEARCHERS	We will keep you informed.	We will keep you informed, listen to and acknowledge your concerns and aspirations and provide feedback on how your input influenced the research process.	We will work with you to ensure your concerns and aspirations are directly reflected in the research process and we will provide feedback on how your input influenced the research.	We will look to you for advice and innovation in designing and conducting the research process and incorporate your advice and recommendations to the maximum extent possible.	We will provide advice and assistance as requested in line with your decisions for designing and conducting your research, as well a for implementing the findings.

Evidence and Policy 15 (3) 423-435 https://doi.org/10.1332/174426419X15532579188099). [Graphic]. (2019). Retrieved October 1, 2019 from: https://i2s.anu.edu.au/resources/stakeholder-participation-iap2-public-participation-spectrum/

If you and your team elect to use the Tool, please let us know: <u>bcsupportunit@healthresearchbc.ca</u>.

We'd be pleased to hear how it's being taken up by research teams and stakeholders.

Patient-Oriented Research Pathways Self-assessment Readiness Tool

FOR RESEARCHERS

Researcher Characteristics

As a researcher, do I have the attitudes and attributes to conduct POR research?

Cri	teria	Learning Goals
Do	I readily?:	
•	participate and collaborate	
٠	establish relationships that exhibit openness and trust	
•	commit to contributing to society, working toward the 'greater good'	
•	respect community values and the lived experiences of patient partners	
٠	support the use of creative methodologies	
•	hold a commitment to patient partners/public involvement	
٠	value research questions that are not researcher-driven	
•	respect the 'cultural gap' between old and new ways of working	
An	n I?:	
٠	inclined toward self-reflection and professional development?	
•	willing to be accountable to patient partners and to the community?	

o others describe me as?:		
Friendly		
Accommodating		
Flexible		
Patient

Appendix: POR Pathways Project Background

This project has been undertaken by the <u>BC SUPPORT Unit</u>, a Unit of the <u>BC Academic Health Science Network</u> funded by the <u>Canadian Institutes</u> of <u>Health Research (CIHR)'s Strategy for Patient-Oriented Research (SPOR)</u>.

Patient-Oriented Research

Patient-oriented research (POR) refers to a continuum of research that engages patients as partners, focusses on patient-identified priorities and improves patient outcomes. This research, conducted by multidisciplinary teams in partnership with relevant stakeholders, aims to apply the knowledge generated to improve healthcare systems and practices. POR is defined here: https://bcsupportunit.ca/about.

Objectives of SPOR²

SPOR's objectives are to foster evidence-informed health care by bringing innovative diagnostic and therapeutic approaches to the point of care, to ensure greater quality, accountability, and accessibility of care. SPOR brings together four stakeholder groups: (1) patients, (2) researchers, (3) health care providers and (4) health system decision-makers, to actively collaborate to build a sustainable, accessible and equitable health care system and bring positive changes in the health of people living in Canada.

Patient engagement in research will improve the relevance of the research and improve its translation into policy and practice, contribute to more effective health services and products, and ultimately, improve the quality of life of Canadians and result in a strengthened Canadian health care system. Guiding principles:

Inclusiveness: Patient engagement in research integrates a diversity of patient perspectives and research is reflective of their contribution— i.e., patients are bringing their lives into this.

Support: Adequate support and flexibility are provided to patient participants to ensure that they can contribute fully to discussions and decisions. This implies creating safe environments that promote honest interactions, cultural competence, training, and education. Support also implies financial compensation for their involvement (see CIHR's Considerations when paying patient partners in research: <u>http://cihr-irsc.qc.ca/e/51466.html</u>).

Mutual Respect: Researchers, practitioners and patients acknowledge and value each other's expertise and experiential knowledge.

² CIHR Strategy for Patient-Oriented Research <u>http://www.cihr-irsc.gc.ca/e/41204.html</u> and Patient Engagement Framework <u>http://www.cihr-irsc.gc.ca/e/48413.html</u>

Co-Build: Patients, researchers and practitioners work together from the beginning to identify problems and gaps, set priorities for research and work together to produce and implement solutions.

CIHR-led Training Modules

Training is also available in an in-person format through the BC SUPPORT Unit's delivery of the "Foundations in Patient-Oriented Research" workshop modules. Details: <u>https://bcsupportunit.ca/foundations-of-por</u>.

Purpose

The Patient-Oriented Research Pathway ("Pathway") articulates how individuals might progress in developing attitudes, knowledge, and skills related to patient-oriented research and research use.

Pathway Development Process

The Pathway was developed by a project team through the BC SUPPORT Unit (see section below for a list of team members). The team derived the Pathway from: (a) published literature from both peer-reviewed and grey sources; and, (b) the voice of experts represented by stakeholders from all four stakeholder groups in British Columbia, Canada, and internationally (see section below for list of expert advisors). Other countries have launched similar initiatives (INVOLVE in the UK; PCORI in the US) yet there has never been a full review of the competencies (knowledge, skills and attitudes) needed by individuals to engage in this work.

The scoping review's purpose was to summarize existing knowledge on such competencies. Our objectives were to systematically explore literature, articulate competencies necessary for POR team members, identify research gaps and provide recommendations for further research. The scoping review included peer-reviewed and grey literature. A total of 2,046 sources was retrieved through standard health databases and search methods. Data were extracted from 35 peer-reviewed papers and 38 grey literature sources. We used an iterative process to reach consensus on competency statements, which inform the Self-Assessment Readiness Tool, i.e. competencies included are based on the literature. An international group of advisors comprised of all four stakeholder groups was consulted, reviewing the findings and providing their perspectives. Our project found a dearth of information written for healthcare providers and health system decision-makers. Further research could validate these findings through a Delphi process with a panel of POR experts.

The scoping review **protocol** is available here:

Mallidou, A. A., Frisch, N., Doyle-Waters, M. M., MacLeod, M. L. P., Ward, J., & Atherton, P. (2018).
